The molecular weights and the K values of the whole polymers as a function of their percent soluble in acetone were plotted on a graph. In this homolog series of polyvinyl chloride, the percent of soluble matter decreases with increase in molecular weight. Different equations are given by various authors to describe the relations between [η] and $\overline{M}_n$ and between [η] and $\overline{M}_{visc}$ of polyvinyl chloride. Therefore a series of whole polyvinyl chlorides polymerized in suspension was investigated, using cyclohexanone as solvent, and determination was made of [η], $\overline{M}_n$ (osmotically) and M_w (by light scattering). Measurements of the viscosity, osmotic pressure, and density have been carried out on amorphous and crystalline polypropylenes. Their solubility in different solvents has been examined.
